

To Whom it may concern,

I am sending this note to encourage our State administrators, Senators and Congressman to do what they can to stop the momentum of wasteful spending at the State level that increasingly burdens resident tax payers and commercial tax payers such that our State increasingly is becoming an uncompetitive and therefore unattractive environment in which to grow.

Whether it be an existing company, starting a new business venture (large or small) and by extension, creating an attractive employment market place for our people to sustain existing family structures, to attract new citizens, Connecticut has 'flatlined' and perhaps past the tipping point, in growth.

Inefficient Government with wasteful spending adds costs to every element of our economic machine. At the end of the day people and businesses vote with their feet and move to areas offering lower government spending per-capita and lower costs of 'business' drives success.

CT needs to break up the calcified 'lock' that provides a good-old-boy employment for life, escalating taxes to cover poor management practices. I hear it every day from friends and family. Ct needs to get real of suffer a decline with an ever increasing tax burden on a shrinking population that is NOT SUSTAINABLE.

Do I hear feet running to the exits?

Great Real, get competitive (efficient), or get out of the way.

Regards,

Jonathan Schmitz
